Bloodborne Pathogens

Exposure Control Plan

May 2021

Bloodborne Pathogen Exposure Control Plan

Developed in accordance with the OSHA Bloodborne Pathogens Standard, 29 CFR 1910.1030

Purpose

The purpose of this exposure control plan is to eliminate or minimize employee occupational exposure to human blood or other infectious body fluids.

Scope

This plan applies to all Middle Bucks Institute of Technology employees who, during the course of their employment, may come into contact with human blood or potentially infectious body fluids.

Responsibility

Director of Facility Operations and the Facility Manager shall be responsible for ensuring their employees comply with the provisions of this plan. Middle Bucks is responsible for providing all necessary supplies such as personal protective equipment, soap, bleach, Hepatitis B vaccinations, etc. Most of these supplies are available from the Maintenance Department. Hepatitis B vaccinations shall be administered through the school physician. The Facility Manager shall be responsible for training employees concerning the disposal of bio-hazardous waste.

Work Practice Controls

Universal precautions will be observed by all employees in order to prevent contact with blood or other potentially infectious materials. All blood or other potentially infectious materials will be considered infectious regardless of the perceived status of the source individual.

The Facility Manager shall solicit input from all Middle Bucks employees responsible for direct clean-up and potential exposure to injuries from contaminated sharps in the identification, evaluation, and cleanup of Bloodborne Pathogens.

Work practice controls will be utilized to eliminate or minimize exposure to all employees working at Middle Bucks Institute of Technology.

1. Employees must wash their hands or other skin with soap and water, or flush mucous membranes with water, as soon as possible following an exposure incident (such as a splash of blood to the eyes)
 2. Employees must wash their hands immediately (or as soon as feasible) after removal of gloves or other personal protective equipment.
 3. No eating, drinking, smoking, applying cosmetics or lip balm, or handling contact lenses is allowed in a work area where there is a reasonable likelihood of occupational exposure.
 4. No food or drinks shall be kept in refrigerators, freezers, shelves, cabinets, or on counter tops or bench tops where potentially infectious materials are present.
-

Housekeeping:

Decontamination will be accomplished by utilizing the following materials:

- 1 US EPA registered disinfectants.
1. All contaminated work surfaces, tools, objects, etc. will be decontaminated immediately or as soon as feasible after any spill of blood or other potentially infectious materials. The US EPA certified disinfectant or disinfectant must be left in contact with contaminated work surfaces, tools, objects, or potentially infectious materials for listed dwell time.
 2. Equipment that may become contaminated with blood or other potentially infectious materials will be examined and decontaminated before servicing or use.
 3. Broken glassware will not be picked up directly with the hands. Sweep or brush material into a dustpan.
 4. Known or suspected contaminated sharps shall be discarded immediately or as soon as feasible in containers that is closeable, puncture-resistant, leak-proof on sides and bottom, and marked with an appropriate biohazard label.
 5. When containers of contaminated sharps are being moved from the area of use or discovery, the containers shall be closed immediately before removal or replacement to prevent spillage or protrusion of contents during handling, storage, transport, or shipping.

6. Reusable containers shall not be opened, emptied, or cleaned manually or in any other manner that would expose employees to the risk of percutaneous injury.
-

Other Regulated Waste

Other regulated waste shall be placed in containers that are closeable, constructed to contain all contents and prevent leakage of fluids during handling, storage, transportation or shipping. The waste must be labeled or color coded and closed before removal to prevent spillage or protrusion of contents during handling, storage, or transport. The container will require Department of Transportation labeling.

Biohazard bags and labels are available through the Health Office/School Nurse office.

Off-site removal of bio-hazardous waste shall be handled by a S.H. Bio-Waste. This shall be coordinated through the Health Office/School Nurse.

Bio-hazard red bags are not to be used for general trash disposal.

Laundry Procedures

Laundry contaminated with blood or other potentially infectious material must be placed in bio hazard red bags.

Facility Manager shall coordinate disposal of contaminated laundry with Health Office/SchoolNurse.

Personal Protective Equipment

Personal protective equipment shall also be utilized.

The Facility Manager will provide gloves, face shields, eye protection, and aprons to employees and will replace or repair personal protective equipment as necessary, all at no cost to their employees.

All personal protective equipment will be chosen based on the anticipated exposure to blood or other potentially infectious materials. The protective equipment will be considered appropriate only if it does not permit blood or other potentially infectious materials to pass through or reach the employee's clothing, skin, eyes, mouth, or mucous membranes under normal conditions of use and for the duration of time for which the protective equipment will be used.

Employees must:

- Utilize protective equipment in occupational exposure situations.
 - Remove garments that become penetrated by blood or other potentially infectious material immediately or as soon as feasible.
 - Replace all garments that are torn or punctured, or that lose their ability to function as a barrier to Bloodborne Pathogens.
 - Remove all personal protective equipment before leaving the work area.
 - Place all garments in the appropriate designated area for decontamination, or disposal.
-

Hepatitis B Vaccine

The Hepatitis B vaccination shall be made available after the employee has received the training in occupational exposure and within 10 working days of initial assignment. It shall be made available to all employees who have potential occupational exposure unless the employee has previously received the complete Hepatitis B vaccination series, antibody testing has revealed that the employee is immune, or the vaccine is contraindicated for medical reasons.

If the employee initially declines Hepatitis B vaccination but at a later date decides to accept the vaccination, the vaccination shall then be made available.

All employees who decline the Hepatitis B vaccination offered shall sign the OSHA required waiver indicating their refusal.

If a routine booster dose of Hepatitis B vaccine is recommended by U.S. Public Health Service at a future date, such booster doses shall be made available at no cost to the employee.

The Hepatitis B Vaccine shall be offered to all Middle Bucks personnel who, during the course of their employment and regular job duties, may come into contact with human blood or potentially infectious body fluids.

Post Exposure Evaluation and Follow-up

All exposure incidents shall be reported, investigated, and documented. When the employee incurs an exposure incident, it shall be reported immediately to their

Supervisor. All exposure incidents involving the use of sharps (or any percutaneous procedure) shall be recorded in the Sharps Injury Log, which will be kept for a minimum of five years by the Health Office/School Nurse.

Following a report of an exposure incident, the exposed employee shall go to the School Physician for evaluation and follow-up, including at least the following elements:

1. Documentation of the route(s) of exposure
2. A description of the circumstances under which the exposure occurred. If the exposure involved the use of sharps (or any percutaneous procedure), this description must include the following:
 - A. The type and brand of the device involved in the incident.
 - B. The department or work area where the exposure occurred.
 - C. An explanation of how the incident occurred.
3. The identification and documentation of the source individual (The identification is not required if the employer can establish that identification is impossible or prohibited by state or local law.)
4. The collection and testing of the source individual's blood for HBV and HIV serological status
5. Post-exposure treatment for the employee, when medically indicated in accordance with the U.S. Public Health Service
6. Counseling
7. Evaluation of any reported illness

The School Physician evaluating an employee will be provided with the following information:

1. A copy of this plan.
2. A copy of the OSHA Bloodborne Pathogen regulations (29 CFR 1910.1030)
3. Documentation of the route(s) of exposure.
4. A description of the circumstances under which the exposure occurred.
5. All medical records applicable to treatment of the employee, including vaccination status.

The employee will receive a copy of the School Physician's written opinion within 15 days of the completion of the evaluation.

The School Physician's written opinion for Hepatitis B vaccination is limited to the following: (1) whether the employee needs Hepatitis B vaccination; (2) whether the employee has received such a vaccination. The School Physician's written opinion for post-exposure evaluation and follow-up is limited to the following information:

1. That the employee was informed of the results of the evaluation.
2. That the employee was informed about any medical conditions resulting from exposure to blood or other infectious materials that require further evaluation or treatment.

All other findings or diagnoses will remain confidential and will not be in a written report.

All medical evaluations shall be made by or under the supervision of a licensed physician or by or under the supervision of another licensed healthcare professional. All laboratory tests must be conducted by an accredited laboratory at no cost to the employee. All medical records will be kept in accordance with 29 CFR 1910.1020.

Training

All high risk employees shall participate in a training program. Training will occur before assignment to a task where occupational exposure may take place and at least annually thereafter. Additional training will be provided when changes such as modification of tasks or procedures affect the employee's occupational exposure.

Any employee who is exposed to infectious materials shall receive training, even if the employee was allowed to receive the HBV vaccine after exposure.

The training program will include at least the following elements:

1. An accessible copy of the regulatory text of 29 CFR 1910.1030 and an explanation of its contents.
2. A general explanation of the epidemiology and symptoms of Bloodborne diseases.
3. An explanation of the modes of transmission of Bloodborne Pathogens.

4. An explanation of the employer's exposure control plan and the means by which the employee can obtain a copy of the written plan.
 5. An explanation of the appropriate methods for recognizing tasks and other activities that may involve exposure to blood or other potentially infectious materials.
 6. An explanation of the use and limitations of methods that will prevent or reduce exposure, including appropriate engineering controls, work practices, and personal protective equipment.
 7. Information on the types, proper use, location, removal, handling, decontamination, and disposal of personal protective equipment.
 8. An explanation of the basis for selection of personal protective equipment.
-

Hepatitis B Vaccine Declination Form

I understand that due to my occupational exposure to blood or other infectious materials that I may be at risk of acquiring Hepatitis B virus infection. I have been given the opportunity to be vaccinated with the Hepatitis B vaccine at no charge to myself. However, I decline the Hepatitis B vaccination at this time. I understand that by declining this vaccine, I continue to be at risk of acquiring Hepatitis B, a serious disease. If in the future I continue to have occupational exposure to blood or other potentially infectious materials and I want the Hepatitis B vaccine, I can receive the vaccination series at no charge to me.
